

"Together We Are Deploying Effective Waste Management Systems and Practices to Help Protect our Environment and your Success"

Our Vision: Creating an economical and sustainable environment where industry thrives whilst actively protecting our planet.

“MAKING RECYCLING YOUR WASTE EASY AND ACCESSIBLE TO YOU”

Fun Facts

Plastic takes thousands of years to break down, polluting soils, waterways and the ocean. When plastic breaks down like this, it turns into Microplastics, which gets into our food & water. It's highly toxic for the environment, and also for our bodies.

HDPE & PP are highly recyclable products. Once cleaned and labels have been removed, we can assist the reclamation of thousands of plastic drums, preventing them going to landfill.

Checklist

PRIOR TO PICK UP

Removal of lids & foil covers

Please remove plastic lids and foil seals and store separately in yellow biohazard bag.

Labels are a different type of plastic

They will need to be peeled off and discarded in yellow biohazard bag

Wash the containers 3 times

Essential to remove all chemical residue of the paint which would otherwise contaminate the drums

Place in the Waste Pack Provided

Ready for Pick Up

If not treated as above they will be classed as Hazardous Waste therefore incurring an additional charge.

Helping to Save Thousands of Tonnes of Waste from Landfill

CONTENT OF WASTE PACK
